Safeguard Your Originals

Bookeye®Scanners

Bookeye®Scanners can digitize books, manuscripts, newspapers, periodicals, files, plans, etc. without damage to the original and without having to remove and replace individual sheets. Bookeye®scanners have an in-built electronic correction for the convex centerfold of an open book called book fold correction.

You can digitize books without flattening them forcefully or removing their bindings. The originals are scanned from above. The book remains on the cradle surface and you just turn the pages. Newspapers can be scanned page wise without cutting or adjusting them to size

Bookeye®Book Cradle

Extend the range of applications of your Bookeye® with the Bookeye® Book Cradle. Libraries and archives favour the book cradle to scan originals with a height of up to 35 cm while avoiding damage to the sensitive spine of books.

Scanner Features

- Overhead scanner no contact with material – no chance of deteriorating the originals
- UV and IR free cool lamps
- Up to A2 size materials & 35 mega-pixel resolution
- 30 bit colour depth internally, 24 bit externally
- Automatic book-fold correction
- Image and contrast enhancement
- Motorized cradle functions
- Continuously movable cradle levels
- Continuous adjustment for width of spine
- Steel housing and cradle

Bookeye® Applications

- Fragile manuscripts
- Newspapers and periodicals
- Bound originals and files
- Legal contracts
- Ancient books
- Stapled sheets
- Maps and drawings
